## PROJECTS

### Weather API Dashboard | *Power BI, DAX, Power Query, Weather API*

- Developed a comprehensive weather analytics dashboard integrating real-time weather data from multiple APIs with interactive visualizations and forecasting capabilities
- Implemented advanced DAX calculations and Power Query transformations to process and cleanse weather data from over 500 global locations with 99.9% accuracy
- Created dynamic visualizations including temperature trends, precipitation patterns, and weather alerts with drill-down functionality for regional analysis
- Designed automated data refresh schedules and error handling mechanisms to ensure continuous data availability and system reliability for end users

### Teenage Phone Addiction Dashboard | *Power BI, Power Query*

- Developed an interactive Power BI dashboard (using Kaggle dataset) to analyze the impact of mobile phone usage on academic performance among teenagers, including data cleaning and transformation using Power Query, and built multi-visual insights (cards, pie chart, scatter plot, line & slicers) to explore behavioural trends and highlight key relationships.
